

FORCED AIR SYSTEM

SUPPLEMENT TO CONVENTIONAL AIRCRAFT DEICING

Forced Air Systems are available on the Elephant® BETA and Elephant® MY deicing units

The Forced Air System provides a valuable supplement to conventional aircraft deicing, as it shows for a snow removal procedure, before aircraft deicing fluid is applied by the same de-icing unit. Thereby a significant amount of ADF is saved, implying both environmental benefits and cost savings.

Important parameters

As air speed drops significantly with increased distance from the nozzle, and as the Forced Air System effectiveness also depends on air flow and pressure, it is imperative to keep a short distance to the fuselage. All the Elephant® deicers facilitate the shortest possible gap (3 - 5 feet) between the highly manoeuvrable nozzle and the treated surfaces on the aircraft.

MAJOR ADVANTAGES

- » Highly manoeuvrable nozzle
- » Short air blow distance
- » Simple operation
- » Easy maintenance
- » Telescopic boom for air nozzle (Elephant® Beta)
- » Remote control (Elephant® Beta)
- » Elevating operator's basket for serving all types of aircraft

Specifications:

Specifications Vestergaard Air Blower:

Elephant® Beta / Elephant® My

- Lowered air speed (~170 m/sec)
- High air flow (~170 ppm)
- Low power consumption (30 kW)
- Low weight
- Low noise level

Caution: Specifications are advisory only, and will vary. Please request exact data.
