

The design of the Elephant® MY is based on Vestergaard Company experience and technology proven reliable over the years. The Elephant® MY is built on a standard truck chassis and can be equipped with a vast array of options to increase its efficiencies while still keeping it simple.

The core concept of the ELEPHANT® MY is to provide the customer with a highly efficient, but yet relatively compact deicer, which can be configured exactly to meet specific requirements, for example in terms of work height, tank capacity, tank configuration, heating system, one-man operation and many other operational features. It is extremely easy to operate, highly manoeuvrable, and has a small turning radius. Moreover, the Elephant®

MY can double as an aircraft washer. The unique boom system – rotating at its base – provides a very wide operating area with smooth and proportional movements as well as great versatility. The advanced boom suspension system provides an almost vertical lifting movement improving stability and a horizontal reach at all work heights.

Boom and fluid systems are powered hydraulically by a variable displacement pump mounted directly on the chassis engine, eliminating the need for an auxiliary engine.

The Elephant® MY is typically built on a Volvo chassis, but can be delivered on other suitable chassis also.

MAJOR ADVANTAGES

- » Extremely easy to operate
- » Optional one-man operation mode for ultimate flexibility
- » Short chassis wheel base for excellent maneuverability
- » Minimum degradation of fluids
- » One, two or three tank configuration
