

ELEPHANT® e-MINI MY LITE

ELECTRIC SMALL DEICING UNIT

MAJOR ADVANTAGES

- » Electric operation for minimal carbon footprint
- » Easy to operate
- » Easy access for the operator
- » Virtually noise free
- » Unsurpassed unit lifetime and low maintenance costs
- » Off the shelf and less costly
- » Easy maneuverable around aircraft

The e-Mini MY Lite is a fully electric deicer on a 12 T chassis. It can be equipped with a 40 or 60 kwh lithium-ion battery and the heating of the fluid can be accomplished with either an electric system or a conventional diesel heater.

The e-Mini MY Lite is a simplified off-the-shelf version of the traditional Elephant MY introduced especially for servicing smaller to medium-sized aircraft and airports. The e-Mini MY Lite can be a sup-

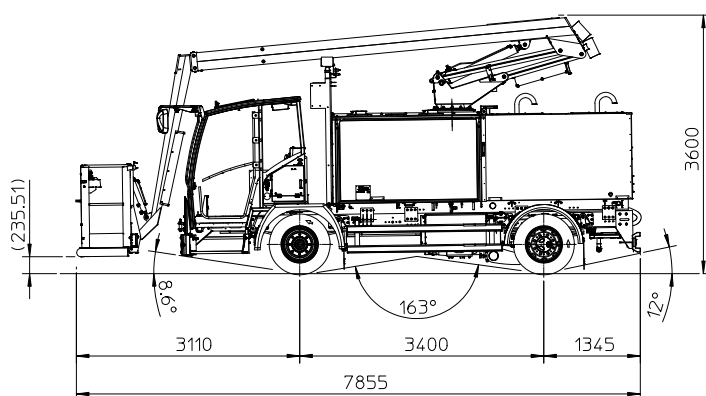

plement to existing deicing fleet or as the backbone of the airport operation servicing aircraft up to and including Boeing 757/767.

The e-Mini MY Lite is a 4,000 liter version with two tanks designed for operations using premix Type I fluid for deicing and pure Type II/IV for anti-icing.

The Vestergaard e-chassis is based on standard industrial electronic compo-

nents, which are thoroughly tried and tested.

With the e-Mini MY Lite operators can now operate equipment in tight gate areas with zero emissions and no small particle pollution. Furthermore noise is practically eliminated as the no diesel engine, and the engine does not sit in idle while waiting.
